Reviewers:

Director of the Institute of space technique and technology, academician of the International Academy of communication, d.t.s.

D.Sh. Ahmetov

Associate Professor, IUIT,

G.I. Hasenova

Candidate engineering sciences AUPET

E.G. Satimova

The textbook is recommended for publication by the Academic Council of the Gumarbek Daukeev Almaty University of Power Engineering and Telecommunications (Minutes No. 3 of 17.10.2017).

S.V. Konshin, G.D. Demidova, E.A. Shabelnikov

K 72 Wireless communications technology: Textbook for students (2nd Edition). S.V. Konshin, G.D. Demidova, E.A. Shabelnikov. Gumarbek Daukeev Almaty University of Power Engineering and Telecommunications, 2020, 158 pp.: Table IL.49, Bibliography. - 39 titles.

ISBN 978-601-7889-62-3

Based on the existing variety of educational and methodological literature and Internet resources on communication technologies. The presented textbook summarizes, systematizes and presents information about modern wireless technologies taking into account the needs of students in studying specific technologies used in the telecommunications industry in Kazakhstan.

Content

Introduction.....	5
Chapter 1	
Overview of mobile communication networks.....	
1.1 Background of network technology development.....	6
1.2 The purpose and classification of wireless communication systems.....	6
1.3 Standardisation in the field of telecommunications.....	8
Chapter 2	10
Mobile wireless communication networks.....	
2.1 Elements of mobile networks.....	
2.2 Authentication and Identification.....	12
2.3 Systems of GSM cellular	
communication.....	12
2.4 Cellular communication with code-division multiplexing (CDMA standards).....	16
Chapter 3	20
Trunked radio system.....	
3.1 Basic provisions.....	21
3.2 Advantages and disadvantages of trunked radio systems.....	
3.3 Classification of trunked radio systems.....	31
3.4 Architecture of trunked communication systems.....	31
3.5 TETRA trunked network standard.....	33
Chapter 4	35
Satellite communication networks.....	
4.1 Basic principles of satellite communication systems.....	39
4.2 Classification of satellite communication systems. Parameters and types of orbits.....	44
4.3 Inmarsat satellite communications system.....	
4.4 Globalstar satellite communications system.....	50
4.5 Thuraya Satellite Communications System.....	50
Chapter 5	52
Multiple access methods.....	
5.1 Methods of multiple access signals and diversity.....	57
5.2 Multiple access based on code division multiplexing (CDMA) system and a direct spread spectrum rearrangement operating frequency.....	57
Chapter 6	59
Optical systems.....	
6.1 Principles of construction of optical communication systems.....	
6.2 Classification of optical communication systems.....	61
6.3 Features of construction of optical communication systems.....	61
6.4 Atmospheric laser communication.....	66

Chapter 7	
Technical concept of building systems BS.....	73
7.1 Propagation in the mobile communication.....	73
7.2 Fundamentals of gain antennas for mobile objects.....	73
7.3 Propagation characteristics.....	74
7.4 Model radio fading caused by multipath propagation.....	76
Chapter 8	81
Spread Spectrum Systems.....	
8.1 The benefits of spread spectrum.....	84
8.2 Basic concepts Spread Spectrum Systems.....	84
8.3 The pseudo-random sequence.....	84
8.4 Characteristics of Direct Spread.....	91
Chapter 9	93
Spread spectrum system by tuning the operating frequency.....	
9.1 Systems with slow rearrangement operating frequency.....	103
9.2 The system frequency agile.....	
9.3 Characteristics of the restructuring of the operating frequency when exposed to noise.....	106
9.4 Scattering time: sustainability of the restructuring of the operating frequency to interference due to multipath	106
9.5 Comparison of CDMA systems with direct expansion and reorganization of the spectrum of the operating frequency.....	107
9.6 Synchronization Spread Spectrum Systems.....	112
Chapter 10	118
Wireless LANs.....	
Questions.....	
Abbreviations.....	123
Conclusion.....	123
List of references.....	125
